## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-4, drawn to a process of making an electrical coil, classified in class 29, subclass 602.1.
  - II. Claim 5, drawn to a product of an electrical coil, classified in class 336, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Groups I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product of Group II can be made by a materially different method, such as one that includes forming the final structure of a coil pattern by coating techniques, with no cutting or punching as required in Group I.
3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
4. During a telephone conversation with Mr. Larry Nixon on March 31, 2006, a provisional election was made with the right to traverse to prosecute the invention of Group I, Claims 1-4. Affirmation of this election must be made by applicant in replying to this Office action. Claim 5

Art Unit: 3729

has been withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Henke 1,801,214.

Henke discloses a method of forming an electrical coil comprising: forming a required coil pattern in a sheet of electrically conductive material by punching (e.g. stamping discussed at page 1, lines 47+).

Regarding Claim(s) 2 and 3, the coil pattern is punched or stamped from a sheet of material and is shaped by stamping and bending from a stamping machine or die (page 1, lines 51-60).

Regarding Claim(s) 4, no patentable weight has been given to any of the limitations of Claim 4 due to the alternative language of “or” recited in Claim 1 (at line 2). Claim 1 only requires that the sheet be formed by punching or cutting, not both. Since the limitations of punching were selected, the limitations directed to cutting (in Claims 1 and 4) do not further limit the claimed process.

***Conclusion***
